

*Caixa Mágica Software is a company specialized in open-source solutions. Having a wide range of products and services developed internally since 2000, it aims to create added value for each client. According to GFK market report, Caixa Mágica is leader in portuguese Linux market in the retail channel.*

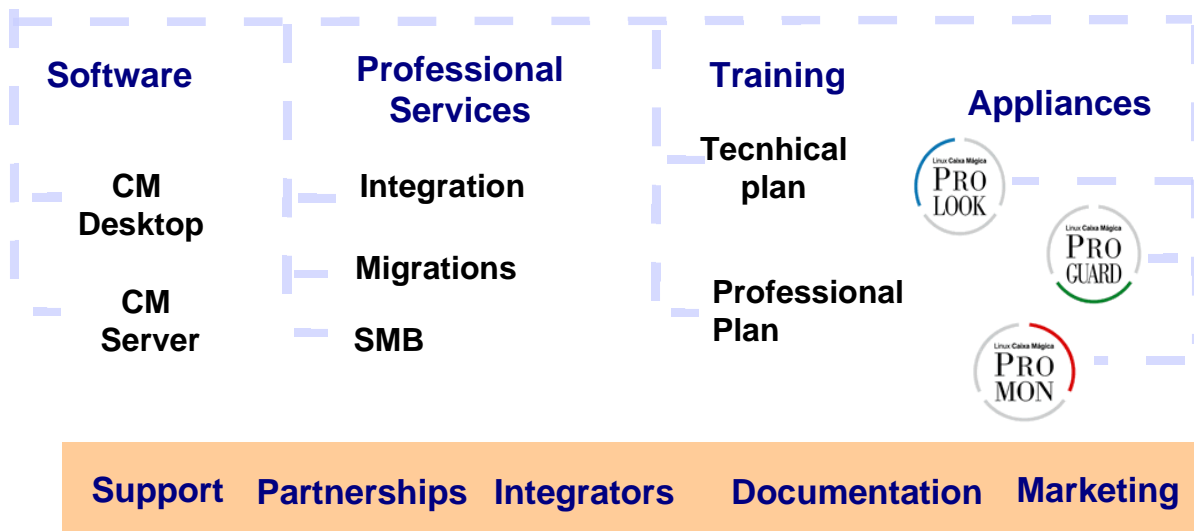

CMS Office building at the center of Lisbon

Caixa Mágica is today present in hundreds of portuguese shops and specialized resellers (FNAC, Vobis, Staples, ...), in Hospitals, Municipal Authorities, and in 1.100 schools spread all over the country, more than 10 universities and thousands of enterprises.

Caixa Mágica is organized in the following units:

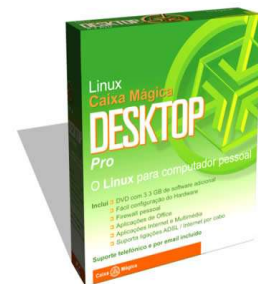

Caixa Mágica  
s o f t w a r e

### Software Unit

The software development unit is the core of Caixa Mágica Software. It is responsible by the production of Linux Caixa Mágica in two *flavours*: Desktop and Server. Each version has a life cycle of one year.

The software unit is also responsible by minor developments in projects of Professional Services Unit that require parametrization or modification of open-source software. That is the case of CMS (Content Management Systems) and E-Learning projects.  
*Clients: Government (Education, ...), public administration, SMB companies, Internet spaces, personal users, ...*

### Appliances Unit

Caixa Mágica Appliances are turn-key products that integrate both software and hardware and are ready to be used by the client. The access is done through a Web interface and a Setup application without access to command-line.

These products include support services.

*Clients: medium businesses, municipal authorities, government departments, Army.*

### Training Unit

Since 2002 that Training Unit is very active in providing Linux and System Administration training to IT professionals.

This area offers three different solutions: training at Caixa Mágica facilities, "on-site" training at the client facilities and E-Learning modules:

(<http://elearning.caixamagica.pt>).

Hundreds of courses had be given both in the technical and professional training plan.

*Clients: Portuguese Army, National Guard, Small Businesses, Large companies, ...*

### Professional Services Unit

This unit is responsible for providing professional support to the client when integrating open-source software at its IT infrastructure.

It has 5 different sub-units: IT integration, SMB, Outsourcing, Large projects and Migrations.

*Clients: Public institutes, large companies, telecoms, ...*

#### Do you know ?

- Caixa Mágica had be chosen by Ministry of Education to provide 15.000 new computers with Linux Caixa Mágica (dual boot)? It worked so well that a second phase with another 5.000 computers is going on.
